## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-14 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 6,317,435 in view of U.S. Patent No. 5,790,534.

The U.S. Patent No. 6,317,435 are encompassed the claimed of application. However, the U.S. Patent No. 6,317,435 does not disclose using fast forward power control and using an acknowledgement and negative acknowledgement protocols. In an analogous art, Kokko et al. disclose using fast forward power control and using an acknowledgement and negative acknowledgement protocols. One skilled in the art would have recognized using fast forward power control and using an acknowledgement and negative acknowledgement protocols, and would have applied Kokko et al.'s forward link applies fast closed loop control in Tiedemann, Jr. et al.'s maximizing the use of available capacity in a communication system. Therefore, it

Art Unit: 2665

would have been obvious to one of ordinary skill in the art at the time of the invention to use Kokko et al.'s load control method and apparatus for CDMA cellular system having circuit and packet switched terminals in Tiedemann, Jr. et al's method and apparatus for maximizing the use of available capacity in a communication system with the motivation being to provide fast closed loop control (col. 6 line 8-10).
